EST from a cDNA of a gene whose expression is spatially restricted
during embryogenesis. We have established its expression pattern
during embryonic development by whole mount in situ hybridization
on zebrafish embryos from the gastrula stage to 2 days of
development. The corresponding data available on the zebrafish
community database at http://zfin.org/ cDNA library preparation: B.
Riggleman. DNA Sequencing by:IGBMC sequencing facility. Clone
Riggleman. DNA Sequencing by:IGBMC sequencing facility. Clone
distribution: zebrafish international resource center at the
University of Oregon (Institute of Neuroscience, 1254 University of
Oregon, Eugene, OR 97403-1254)
Seq primer: TA ATTAACCCTCACTAAAGGGA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EST.

                                                                                                                                                                                                                                                                                                                                                BD023626
Polypeptide |
(bHLH) famil:
                                                                               Disess 1 to 1491)

1 (bases 1 to 1491)

Liepkalns, C.I., Mallet, J. and Ravassard, P.

Polypeptide belonging to the family of basic helix-loop-helix

(bHLH) family and nucleic acid sequence corresponding thereto

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: Bstimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft data.html).

NOTE: This is a 'working draft' sequence. It currently
consists of 3 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence

                                                                                                    NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GAGTGACCTÁATCCAGTGT 1460
